Subject: Microsoft

I have grown to really enjoy my computer and the ability to get all sorts of information about the whole wide world. But the reason I could do so was due to Microsoft and their fantastic software. If I had to install each feature by myself, I could never do so as I am not a "techie". What are all the competitors of Microsoft screaming about, they are complaining because they have failed to come up with a better product and are looking to the government to fight their battle for them.

Please allow Microsoft to continue to innovate so that the consumers like me can continue to benefit. AOL is seeing green at Microsoft's cash and wants the DOL to help them get a share.
